TEKTITE 2025 E-PITCHING DAY: HEALTHCARE – A GREAT SUCCESS!

We are thrilled with the success of TEKTITE 2025, where innovators and industry leaders came together to explore cutting-edge advancements in healthcare. The event was filled with insightful discussions, groundbreaking pitching ideas, and meaningful connections that will drive future collaborations.

A huge thank you to all the participants and attendees who made this event truly special. Your contributions and engagement were invaluable, and we look forward to seeing how these conversations evolve into impactful partnerships.

NUCLEIC ACID EXTRACTION KIT

A Korean startup, InvirusTech, developed a technology through a collaboration of academic and research institutions. InvirusTech offers a nucleic acid extraction technology that enhances the accuracy of molecular diagnostics by overcoming PCR inhibitors without the use of toxic substances like phenol and chloroform. This technology is used in the pre-PCR step to enable precise molecular diagnostics across various samples, including mosquitoes, ticks, plants, insects, sewage, animals, and humans. The key advantages include ease of use, safety due to the absence of toxic chemicals, and improved diagnostic accuracy.

InvirusTech seeks collaborations with national institutions and research centers involved in pathogen monitoring. They are interested in manufacturing finished products domestically or providing semi-finished products to partners.

COPYRIGHT REGISTRATION COMPLETED FOR DELBIZNETWORK & TEKTITE

We're proud to announce that our open innovation portal, DelBizNetwork, and TEKTITE B2B matchmaking platform – B2Partner, have officially been registered and certified for copyright protection in South Korea.

This milestone reinforces our commitment to providing secure, innovative, and user-driven platforms that empower global collaboration and business growth.
